Class 2 Maths Chapter 1 Revision Notes: A Day at the Beach

A quick summary of Class 2 Maths Chapter 1 — how to count large collections quickly and accurately by arranging them into equal groups first.

Class 2 Maths Chapter 1 Revision Notes: A Day at the Beach

Chapter type: Counting and number sense (grouping-based counting, a stepping stone to skip counting and multiplication tables).

Key ideas to remember:

Counting in twos $\times 2 \times 80 \times 94$ group objects into pairs and count 2, 4, 6, 8, 10... instead of one at a time.

Counting in fives $\times 2 \times 80 \times 94$ group objects into sets of five and count 5, 10, 15, 20...

Counting in tens $\times 2 \times 80 \times 94$ group objects into sets of ten and count 10, 20, 30... plus any leftover ones — this previews place value.

Why grouping helps $\times 2 \times 80 \times 94$ counting in groups is faster and reduces the chance of losing count compared to counting one object at a time.

What you should be able to do after this chapter:

1. Arrange a small pile of objects into pairs, fives, or tens and count the total using skip counting.
2. Choose the best group size (2, 5, or 10) for a given collection to count it quickly.
3. Explain why counting in groups is faster and more reliable than counting one by one.

Remember: Grouping and counting is not just a shortcut — it is the child's first real step toward place value and multiplication, so it is worth practising with real objects at home, not just on paper.
